Badge Overlay

Update Manual · Version 2026.09.08.0001

Recent release notes. See CHANGELOG.md in the install folder for full history.

[2026.09.08.0001] -- 2026-09-08

Fixed

- **"Discard" buttons never got the Danger (red) badge color, unlike "Delete"/"Cancel"/"Remove."** `Core/ButtonDetector.cs`'s keyword list and `Core/UIADetector.cs`'s had drifted apart -- the UIA-based classifier already treated "discard" as destructive, the button-text classifier didn't. Replaced both hand-maintained lists with one shared `IsDestructive()` helper (`Core/DetectorLabels.cs`) covering delete/remove/discard/clear all/empty/uninstall/revoke, so the two classifiers can't silently drift apart again.
- **Hovering the selected row in the Custom Rules list hid the selection highlight.** `Windows/CustomRulesWindow.xaml`'s selected+hovered `MultiTrigger` was declared after the plain `IsSelected` trigger and repainted the row with the same background used for a plain hover -- while the mouse sat over the selected rule there was no visual difference from just pointing at any other rule. Selected+hovered now keeps the selected background and layers a hover-colored border on top instead.

[1.0.0] -- 2026-05-07

First stable release. All Must / Should / Nice / Engineering tiers from

the original accessibility review have been shipped. See the sections below

for the complete change history across all pre-release development.

Distribution

- **SECURITY.md** -- vulnerability disclosure policy, reporting channels,

response timeline, and scope definition.

- **CONTRIBUTING.md** -- stack overview, setup instructions, project layout,

code-style rules, WCAG AAA checklist, PR checklist, and guidance on

what is and isn't welcome.

- **NSIS installer changelog (#70)** -- welcome screen now lists the

headline features of this release so users know what they're installing.

- **NSIS LICENSE acceptance (#74)** -- installer now shows the full licence

text (`MUI_PAGE_LICENSE`) with a mandatory checkbox before installation

proceeds. Standard practice for distributed desktop software.

- **THIRD-PARTY-NOTICES.txt, CONTRIBUTING.md, SECURITY.md** shipped

alongside the EXE at install time and removed cleanly on uninstall.

- `APP_URL` corrected to `https://github.com/lordmaus/Badge-Overlay`;

`HelpLink` registry key added pointing to `https://oldgamerssoftware.com/`.
